

ROUND HOLE BOTTOM STRAINER

MATERIAL: Zinc Plated Steel

THREAD: Female NPSM

Round Hole Bottom suction strainers are used on the suction end of a suction hose to help prevent debris from being sucked into your pump. This is a critical component that helps protect your suction pump from damage or clogging. It has a female NPSM thread which connects to the male NPT on your suction hose.

These suction strainers are designed to be attached to the submerged end of a suction hose to prevent debris from entering the hose and pump.

PART #	Female Thread Diameter	Outside Diameter (OD)		Height (H)		Weight	
		Inch	mm	Inch	mm	(lb/each)	(kg/each)
